JAKE 350 DG

JAKE 350 DG has been designed for a 3-point fastened digger. Mounting the digger to the tractor¹ frame instead of the 3-point linkage gives the maximum digger power because the whole tractor weight, not only the weight of the digger, acts like a counterweight.

Tractor Part of the **JAKE 350 DG** being the same as the Tractor Part of the **JAKE 600** makes mounting a forestry crane on the same tractor easy and economic because the crane only needs its own Crane Part, not a complete another mounting frame.

¹ Choose JAKE 354 DGHD for Valtra N4 and T4.
