## JAKE Armour

**JAKE Armours** have been designed for protecting the basis of the tractor against different damage during forest work. In the presence of a plastic fuel tank, a battery box and a compressed air unit, the **JAKE Armour** provides a reliable protection for all of them. The protection can be completed with a **JAKE Engine Armour** which covers the front axle cardan and oil sump. The **JAKE Armour** improves runnability and maneuverability of the tractor in the forest, turning a tractor bottom into a flat, smooth surface. For little service works, such as changing oil filters, there are some shutters in the Armour. **JAKE Armours** are mainly fastened to the Aid Frame of the **JAKE Mounting Kit**. If a tractor is not equipped with the **JAKE Mounting Kit**, the Aid Frame must be ordered together with the **JAKE Armour**.
