JAKE Forest Tank + Armour

The **JAKE Forest Tank + Armour** turns a tractor into a real professional forest machine giving the best possible clearance and bottom shape. The **JAKE Forest Tank + Armour** is available for all Valtra N1, N2, N3 and N4 models.

The **JAKE Forest Tank + Armour** has been designed to be mounted instead of a Valtra original plastic or steel fuel tank. The **JAKE Forest Tank** consists of one or two armoured tanks, the armour for possible AdBlue tank, the armour set to cover the whole basis of the cabin, armoured and lockable tool and battery boxes. The **JAKE Forest Tank** does not demand the Aid Frame of the **JAKE Mounting Kit**, unlike other **JAKE Armours**, but naturally all **JAKE Mounting Kits**, **JAKE Front Linkages**, etc. are compatible with the **JAKE Forest Tank**.

The original Valtra fuel meter shows correct level of fuel in the **JAKE Forest Tank**, too. The **JAKE Forest Tank** delivery includes new ladders designed especially for a forest use. The **JAKE Forest Tank** is also available for a tractor with a front loader, a front linkage, cabin suspension, front axle suspension and a compressed air unit. A flat bottom shape and full cabin basis protection provided by the **JAKE Forest Tank** can be completed with a **JAKE Engine Armour** and a **JAKE Rear Armour**.

Without **JAKE Engine Armour**
