JAKE Rear Armour

JAKE Rear Armour has been designed for a harvester use and is mounted to the lower arms of the rear three-point linkage. The **JAKE** Rear Armour protects a crane basis by preventing branches from getting under the cabin. While reverse driving the **JAKE** Rear Armour directs branches and bushes under the tractor, away from causing damage under the cabin.

Assembling and disassembling of the **JAKE** Rear Armour is easy and fast as the Armour is lifted to its place by the lower arms of the 3-point linkage and fixed to the fastening point of the upper arm.

Connecting and disconnecting the **JAKE** Rear Armour when a trailer is attached must be done manually, without help of the linkage.
