

The stairwell is a danger point in apartment building fires

In an apartment building, it is important for the occupants to be able to act safely in the event of a fire.

A lot of toxic smoke from the burning apartment easily spreads into the stairwell. It is safest for neighboring residents to stay closed in their own apartment during a fire. The apartment buildings are built in such a way that the fire cannot easily spread from one apartment to another. Do not reach out through the smoky staircase, as the smoke stuns quickly!

Stairways must be kept accessible at all times in the event of an emergency.

No stuff should be left for them, even temporarily. In various emergencies that require rapid action, the goods are blocked for both rescuers and residents. In addition, the goods attract vandalism. For example, a stroller lit by a fire fills the entire stairwell with toxic smoke in a couple of minutes.

Escape routes in the yard area must also be kept clear. Roads reserved for emergency vehicles and rescue equipment must be free of cars, plantings, vents or other obstacles.
