# Lost Songs

for piano, accordion and tape

op. 28 (2014)

Score for Piano

What does a lost song sound like?

Man has caused the loss of numerous animal species by his actions. Most vulnerable have been the birds of isolated islands, defenseless against our hunting frenzy and the foreign species brought along by us. As a sad document of these species, we can admire the stuffed Dodos, Great Auks and other extinct birds in museums of natural history. But their song is lost forever.

The Huia was last seen in New Zealand in the beginning of 20th century, and the song of this relatively small forest bird was never recorded. Decades later, Hennery Hammaneh, who had heard Huias singing as a young boy, was brought to a studio. Now all that we know of the song is a recording of this man mimicking it by whistling.

Lost Songs for piano, accordion and tape was inspired by this recording which forms the basis of the tape part. In the Prologue, small spoken fragments lead into a whirl of emotions. In the second part, titled "The Song", the recorded song itself is present. In the Epilogue, only a horribly bleak remembrance remains.

*Lost Songs* is commissioned by and dedicated to Elisa Järvi and Andrea Kiefer. The commission was funded by support of the Madetoja Foundation. The composer is also deeply grateful for the Sibelius Fund for supporting his work.

First performance: August 8th 2014, Musiikkitalo, Helsinki, by Elisa Järvi, piano, Andrea Kiefer, accordion and James Andean, electronics.

The tape part is acquired from the Macaulay Library and presented with kind permission of the Cornell Lab of Ornithology.

Duration: 8'00"

## INSTRUCTIONS:

Performers should sit in their ordinary positions. However, in the beginning of the Prologue, the accordionist should sit *turned away from the pianist*, reacting to the piano only by hearing. In bars 16-17, after the second tape sample, the accordionist turns to the normal playing position.

In b. 1-25, accordion should allow as little change in dynamics of the upper register as possible, creating an illusion of *forte* in the left hand and *pianissimo* in the right hand.

The tape part should preferably be played by an assistant taking care of the best possible dynamics of the samples (samples for The Song loud, almost shrilling, samples for the Epilogue just barely audible). For this purpose, use of original samples acquired from the composer's website [www.mantysaari.com](http://www.mantysaari.com) is preferred.

However, it is also possible to perform the work by using a CD provided with this score (in which the volume levels are readily approximated) and operated by the pianist. The first track, consisting of two minutes of silence, should be launched before the performance starts, after which only the next track button is needed to start every following sample.

At least two loudspeakers are placed around the performers to create a stereo effect. Every sample should start exactly from the place indicated by a circled box number.
