

**THERAPY AND EXAMINATION COUCHES
GYNAECOLOGY CHAIRS**

BTL offers a complete series of rehabilitation and examination couches ranging from simple couches with fixed height to six-section electrically adjustable couches. The standard couch parameters can be customised to meet your specific needs.

The couches have been carefully designed with both the patient and physician in mind. BTL offers them in a large range of upholstery colours and accessories. Other distinctive features include superior stability and durability, high quality artificial leather covers and heavy-duty motors. All couches are supplied with gas-spring supported adjustment of the head section.

BTL couches offer quality and the parameters you desire.

Summary of the most important features

- ◇ Functional design providing high standard of safety and comfort
- ◇ Universal in use
- ◇ Durable in construction
- ◇ Superior stability
- ◇ Manual, gas-spring or electrical control
- ◇ Heavy-duty electric motors
- ◇ Easy maintenance
- ◇ Non-flammable upholstery materials
- ◇ A wide range of upholstery colours
- ◇ A large selection of optional accessories such as exercise accessories, retractable castors or sanitary paper holder

4 ELECTRICALLY ADJUSTABLE COUCHES

BTL-1300 TWO-SECTION COUCH

The BTL-1300 two-section couch is recommended as basic equipment for every physician's office. The electric motor enables height adjustment. The extended model of the two-section couch with an adjustable couch tilt ($0^{\circ}/+20^{\circ}$) is suitable for traction therapy. The standard version of the couch is supplied with a hand switch, gas-spring adjustable head section and breathing hole for the face.

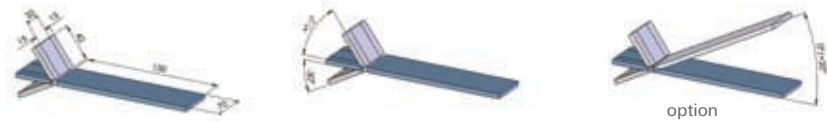

BTL-1300 THREE-SECTION COUCH

Besides being supplied with electrically adjustable height, the three-section BTL-1300 couch is also equipped with an electrically adjustable mid-section. The flexion position is optimal for providing therapy to the bottom part of the back. The extended model with negative adjustment is suitable for the Trendelenburg position and manual traction. In its standard version the couch is supplied with a hand switch, gas-spring adjustable head section and breathing hole for the face.

BTL-1300 FOUR-SECTION COUCH WITH A SPLIT HEAD SECTION

This type of motor-driven BTL-1300 consists of a main section and three-section head part which is controlled by a gas-spring support. The position of the armrests (in the head section) can be adjusted and fixed. The couch is supplied in its standard version with a hand switch and breathing hole for the face.

BTL-1300 FOUR-SECTION COUCH WITH A SPLIT FOOT SECTION

This motor-controlled couch consists of a gas-spring adjustable head section, mid-section and split foot section. The gas-spring support controls the foot tilt. The couch is equipped with 2 motors for electrical control of the height and mid-section. The couch is supplied in the standard version with a hand switch and breathing hole for the face.

BTL-1300 FIVE-SECTION COUCH

The BTL-1300 five-section couch is equipped with motor-controlled height and motor-controlled mid-section. It consists of a three-section head part with a breathing hole for the face, lumbar and foot section. The head part is controlled by a gas-spring support.

BTL-1300 SIX-SECTION COUCH

The BTL-1300 six-section couch is an extended option of the five-section model with a split foot section. The couch is equipped with 2 motors for electrical height and mid-section control. Both foot sections can be adjusted separately using gas-spring supports. This model offers the user maximum possibilities of therapy.

SITTING ADJUSTMENT OF BTL-1300 COUCHES

The sitting adjustment is performed by simple tilting of the foot section and reclining of the head section. This feature is available as standard for BTL-1300 4-section couch with split foot section and BTL-1300 6-section couch. It is optional for BTL-1300 3-section and 5-section couches.

Sitting adjustment of the BTL-1300 3-section couch (optional)

BTL-1300 BOBATH COUCH

The BTL-1300 Bobath couch is designed for Bobath and Vojta exercise therapy. It ensures sufficient space for the therapist and the patient. It is supplied in a single-section or two-section option.

The standard dimensions are 190×90 cm and can be adjusted in line with the customer's wishes.

BTL-1300 BASIC TWO-SECTION COUCH

The BTL-1300 Basic couch series is supplied at a very reasonable price for the motor-controlled adjustable couch version, with a simplified construction but retained superior stability, construction durability and precision-making. The head section is controlled by a gas-spring support. The standard model can be extended to include the breathing hole in the head section.

BTL-1300 BASIC THREE-SECTION COUCH

Unlike its two-section version, this couch is supplied with a split main section. It is equipped with a second electric motor for comfortable control of the mid-section. The standard model can be extended to include the breathing hole in the head section.

TRACTION COUCHES

The BTL-1100 Trac and BTL-1300 Trac couches are specially designed for lumbar and cervical traction, but they may be also used for examination and other forms of therapy.

The movable section of the couch makes therapy friction-free, giving the patient maximum muscular relaxation, limiting any unpleasant feelings and facilitating therapy.

BTL-1100 TRAC

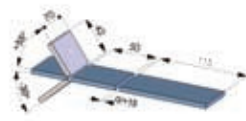

The BTL-1100 Trac is a three-section couch with a fixed height of 70 cm and gas-spring adjustable head section (+50°/-45°). The foldable frame of the couch allows its economic packing and easy transportation.

For the technical parameters of the BTL-1100 Trac couch please see the Table on page 15.

BTL-1300 TRAC

The BTL-1300 Trac is a three-section couch with electrically adjusted height (42-95 cm) and gas-spring adjustable head section (+55°/-30°).

For the technical parameters of the BTL-1300 Trac couch please see the Table on page 13.

BTL-1300 Trac

BTL-16 PLUS

The BTL-16 Plus is a microprocessor controlled traction device suitable for continuous, intermittent, harmonized cervical and lumbar therapy. The unit has four digital displays and digital interface for easy setting of therapy parameters. It can be used with the traction couches BTL-1100 Trac and BTL-1300 Trac.

Main features include:

- ◇ User-friendly digital interface
- ◇ Continuous, intermittent and harmonized traction programmes
- ◇ User-defined hold, rest and treatment times
- ◇ Intermittent and progressive settings
- ◇ Real-time digital treatment tracking
- ◇ Built-in safety features
 - patient interrupt switch
 - audible signal at the end of the treatment
 - audible signal if the patient interrupt switch is activated
- ◇ Ergonomic design
