

The finger acts as a key

Siedle brings the security and convenience of professional fingerprint recognition to every entrance. In the accustomed standard of Siedle quality and design excellence, fully integrated into the door communication system.

Convenient

- No more lost, mislaid or forgotten keys
- Always "at hand", no searching and rummaging needed
- No heavy, bulky bunch of keys

Secure

- Eliminates the possibility of theft or key copying
- Use leaves behind no usable trace
- Recognizes only "living" finger prints on real people

Reliable

- Unlimited outdoor use whatever the weather
- Ergonomic finger guidance
- Night design with illuminated display panel

Greater convenience and security -
at every entrance.

Fingerprint recognition is already a commonly used technology in the professional arena. Siedle is now making its many benefits accessible to home owners. Integration in the door station or letterbox system ensures optimum functionality and a perfect aesthetic match.

Simple connection

The fingerprint reader is integrated in the Siedle communication system. No* additional devices are required.

Simple programming

Siedle Fingerprint is programmed directly at the fingerprint reader* without the use of a PC.

Simple management

Users can be managed in groups - handy for guests who should only be given temporary access.

* In stand-alone operation at a door. For more complex applications, additional upgrade stages are available.
