## JAKE Support Legs

**JAKE** Support Legs have been designed to ensure a reliable balance and stability for a tractor-crane combination and to be mounted on **JAKE 600, 800, 804, 800/804 Tilt Mounting Kits**. The Support Legs are available in three categories: **JAKE** Standard, **JAKE** Tele and **JAKE** Heavy Duty.

### JAKE Tele

The **JAKE** Tele Legs have been designed to be mounted on **JAKE 600, 800, 804, 800/804 Tilt Mounting Kits** for improving stability of a tractor-crane combination during work. The advantage of the **JAKE** Tele is to be used in a limited space, e.g. a wood chipper work, and they are powerful enough to lift and hold up rear wheels. The width and the height of the **JAKE** Tele are adjustable and can be set

so that their width is not wider than the tractor. The maximum width of the legs at the lower position is 3,6 metres. With the **JAKE** Tele Legs the working conditions of a tractor driver become more comfortable.
