

References – Aarhus Project

Key points from the evaluation of the Aarhus City project. The participants were asked before and after they have had a Bidet Seat installed. The participants have on average had the Bidet Seat for 10 months and the average age among the participants was 74 years. After the project, Aarhus and many other cities in Denmark decided to scale up and offer bidet seats specially in the home care. To date Aarhus City has more approx. 800 seats installed in the home care and nursing homes.

Economic benefits

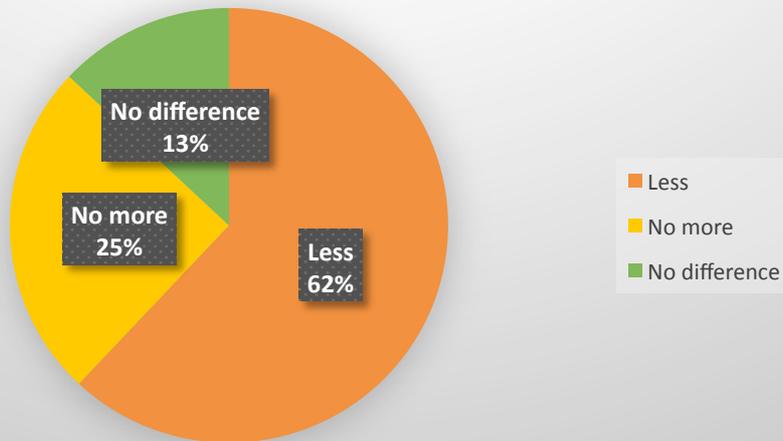

Before the project Aarhus City hoped to save 35 min. each week pr. user.

- The results show that Aarhus are able to save at least **52 min** each week. pr. user
- According to Aarhus's calculations – the municipal will save at least 8,5 Mio. DKK pr. year with 500 Bidet Seats installed.
- The results don't take the cost savings associated with better health from the users into account. E.g less cost associated with fewer hospital admissions with Urinary Tract Infection (UTI) issues.

52% have had skin issues before installing the Bidet. After the installation 82% has less or no skin issues.

UTI AFTER INSTALLATION

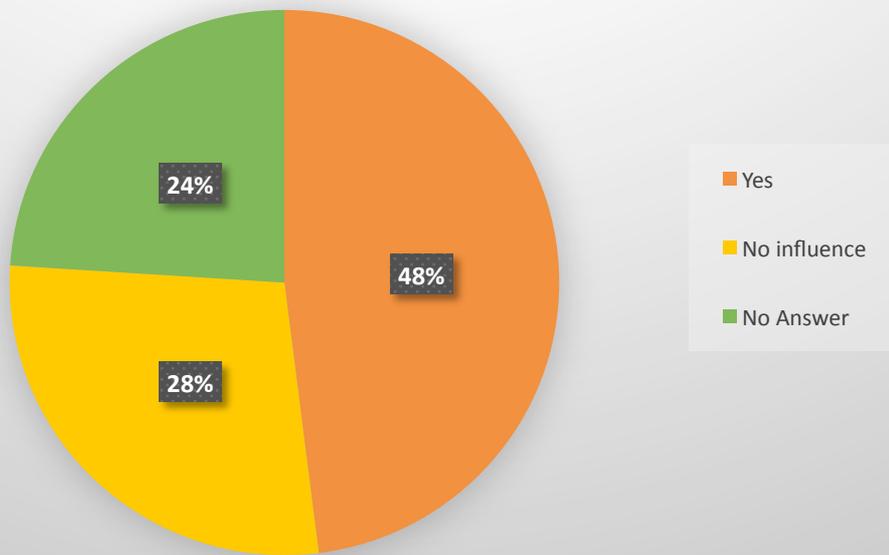

38% of the users had issues with UTI before installation of the Bidets. 87% of the users have experienced a positive effect on UTI issues.

ISSUES WITH INTESTINAL EMPTYING

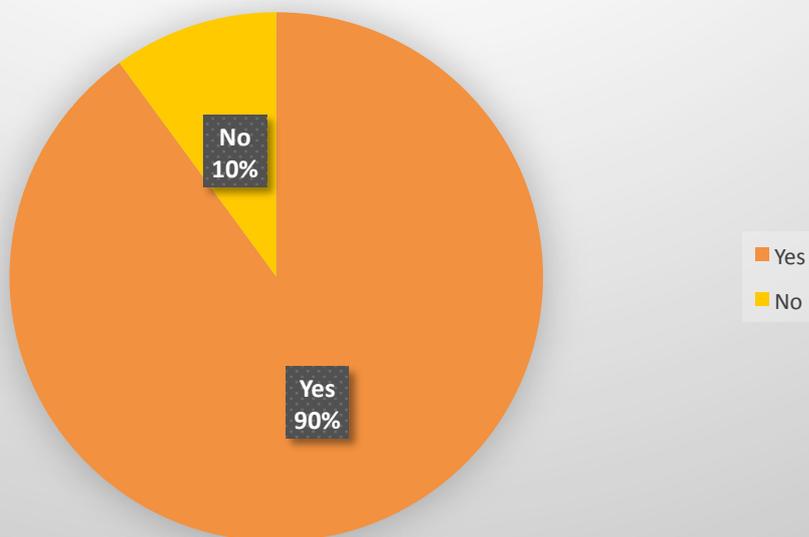

POSITIVE EFFECT ON WORK ENVIRONMET

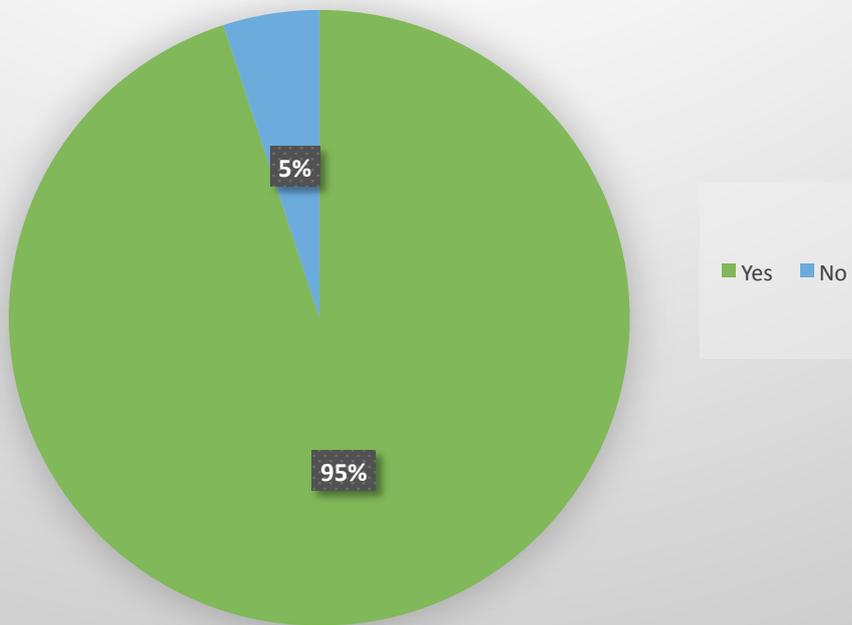

48% of the nursing staff indicates that the Bidets has a positive influence on their work environment.

Fulfilled users expectations?
